Un ordinateur peut-il…

- jouer aux échecs
- effectuer des raisonnements logiques
- trouver un itinéraire sur une carte routière
- …
- marcher sur deux jambes
- …
- reconnaître un sourire dans un visage
- …
- jouer de la musique avec des musiciens ?

Automatic Accompaniment using *Antescofo*

Concerto pour main gauche, Ravel. *Pianiste*: Jacques Comby
Orchestre: enregistrement de l'Orchestre de Paris modulé par *Antescofo* en temps réel

Tesla ou l'effet d'étrangeté Julia Blondeau (2014)

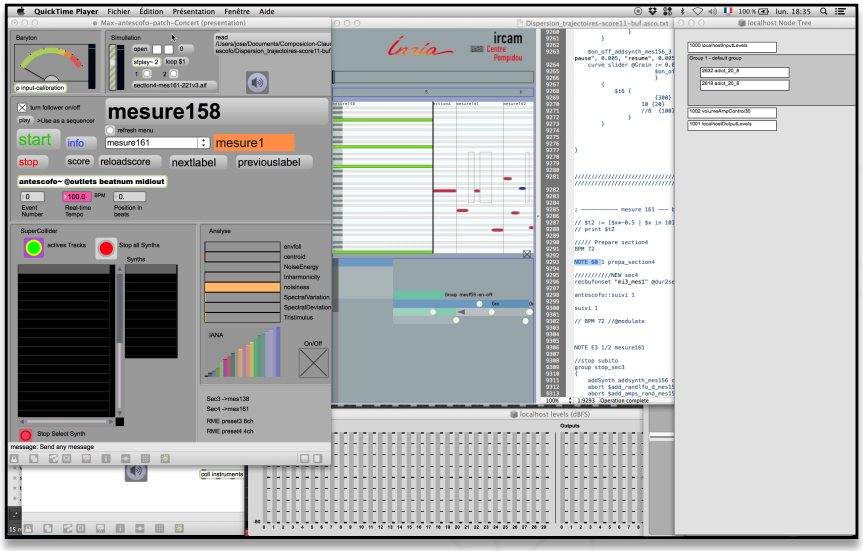
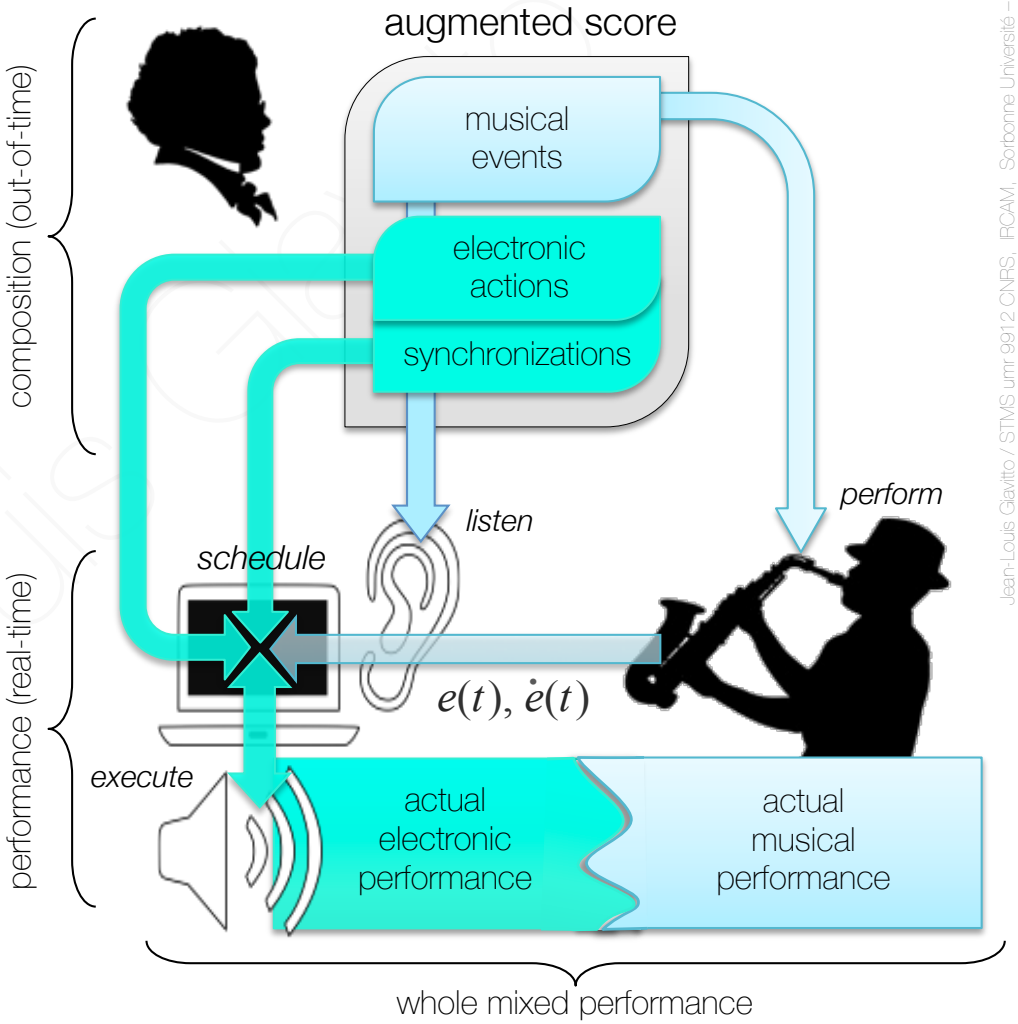
reactive, strongly timed language + score following

Antescofo





Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC INRIA MuTAnt project

La « solution Antescofo »

- La *partition augmentée* est un programme temps-réel
  - le compositeur est un programmeur
  - l'évaluation se fait par le <musicien | la machine>
  - le compositeur doit spécifier la concordance des deux parties
- La machine d'écoute fournit les entrées du programme côté ordinateur <musicien|écoute|programme réactif>
- Le temps est une entité de 1ère classe du langage
  - ce n'est pas une propriété opérationnelle
  - traiter événement et durée
  - chronométrique et relationnel
  - définir des repères temporels par synchronisation avec un autre repère
- Le musicien a son propre repère temporel
  - le tempo n'est pas une vitesse quand l'humain est dans la boucle

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ☞ INRIA MuTAnt project

Notion of

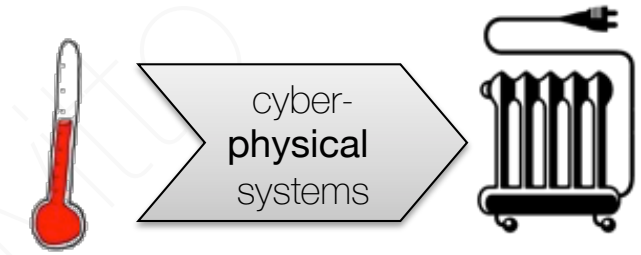
CYBER-TEMPORAL SYSTEMS

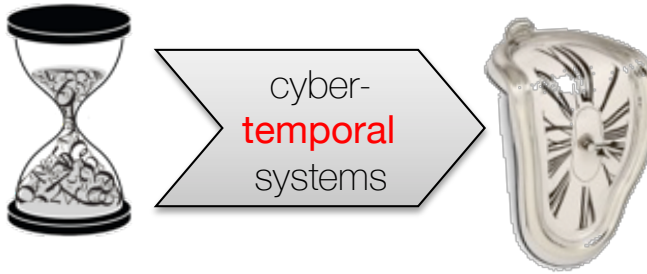
Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Cyber-temporal systems:

computing time in real-time

- *from:* physical entities
  monitored by algorithms
- *to:* temporal relationships
  sensed and produced by algorithms
- *example:* interactive music systems
  Antescofo

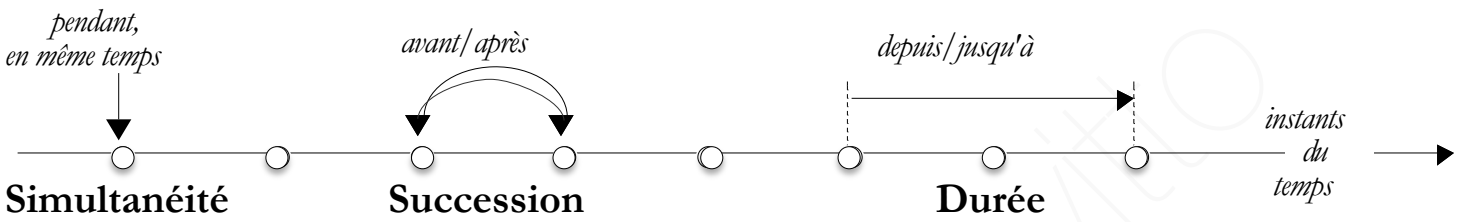


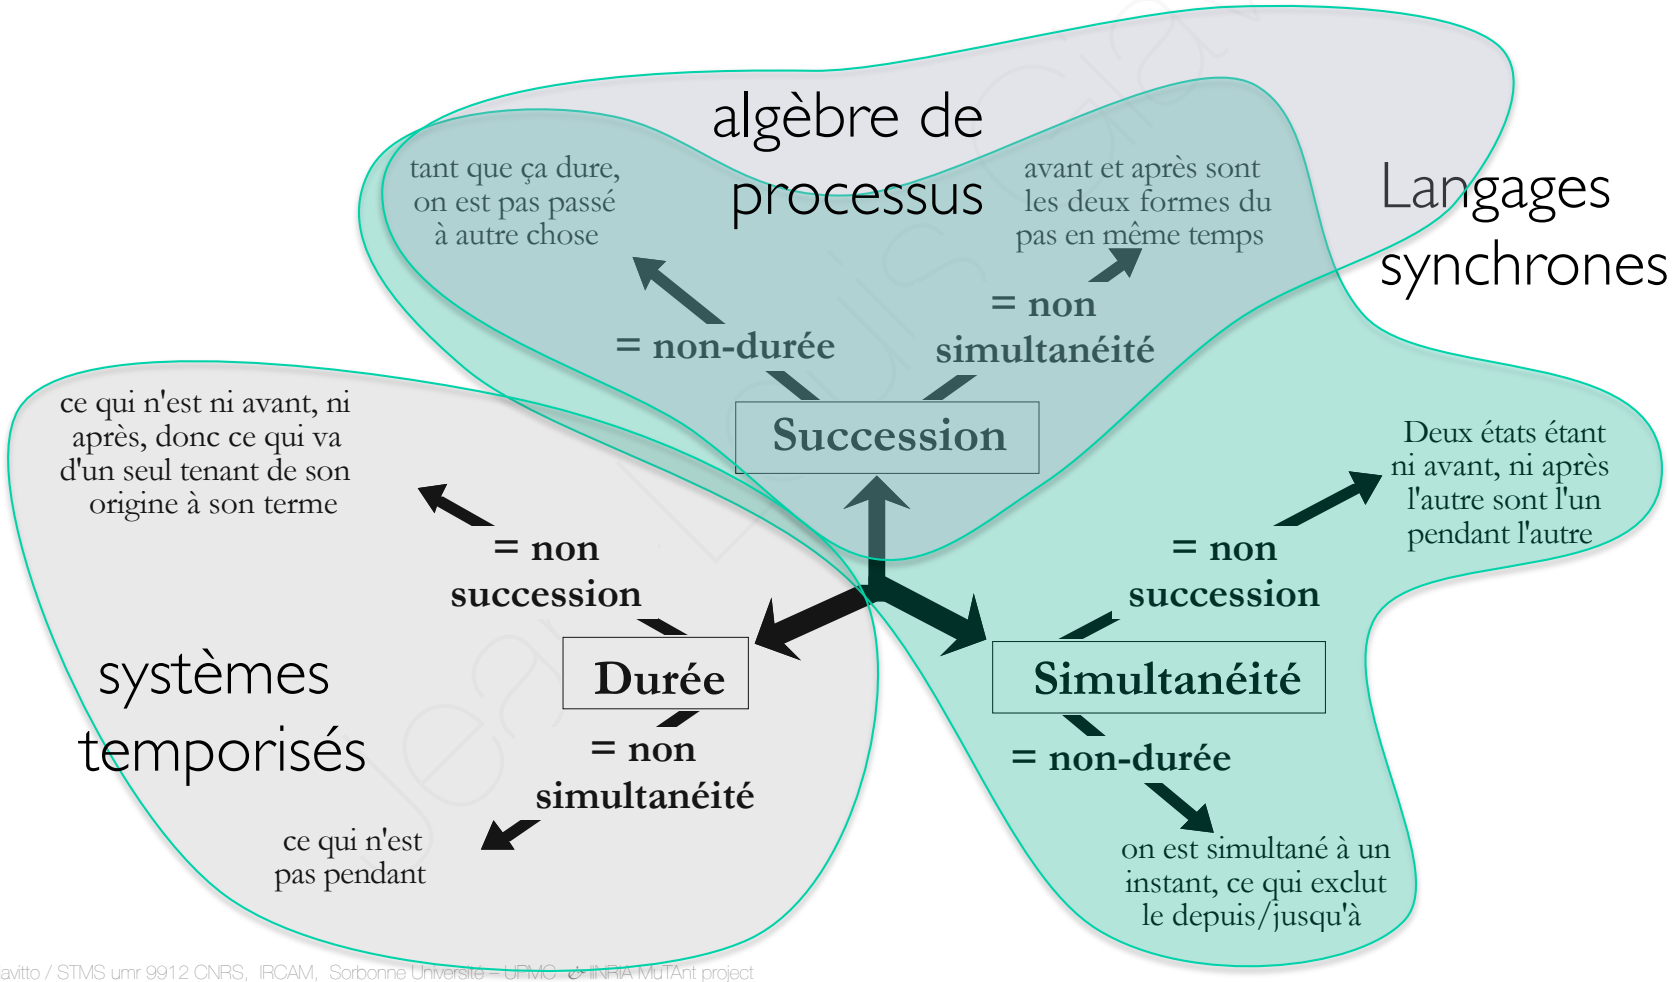


- notion**S** of TIME:
  - multiple times: deferred time, real-time
  - multiple models of time: event-driven, time-driven
  - multiple scales: from audio (0.02 *ms*) to control (*hours*)
  - time programmability: time is a denotable entity

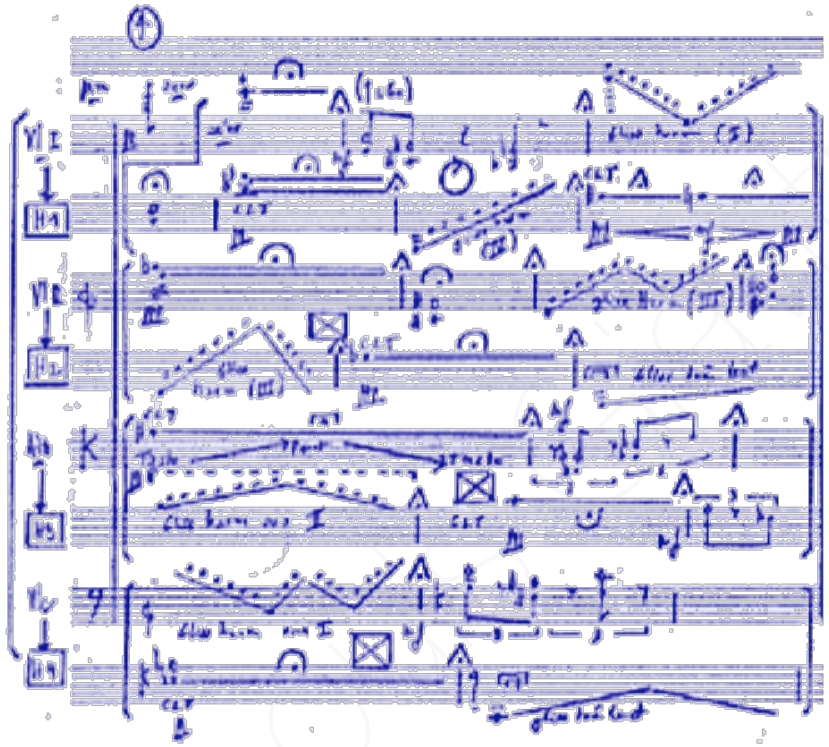
Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC INRIA MuTAnt project

Simultanéité, succession & durée





Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC & INRIA MuTAnt project



AN HYBRID TIME

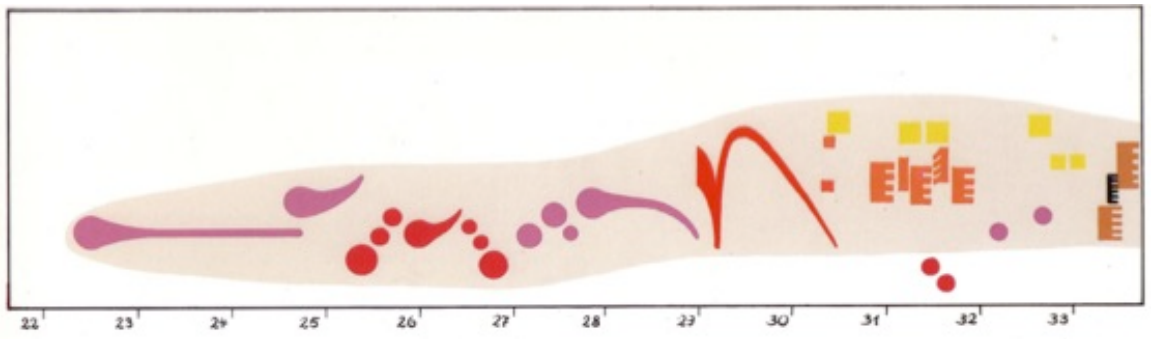
Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ☞ INRIA MuTAnt project

A Score

- instantaneous events
  (e.g. the onset of a note)

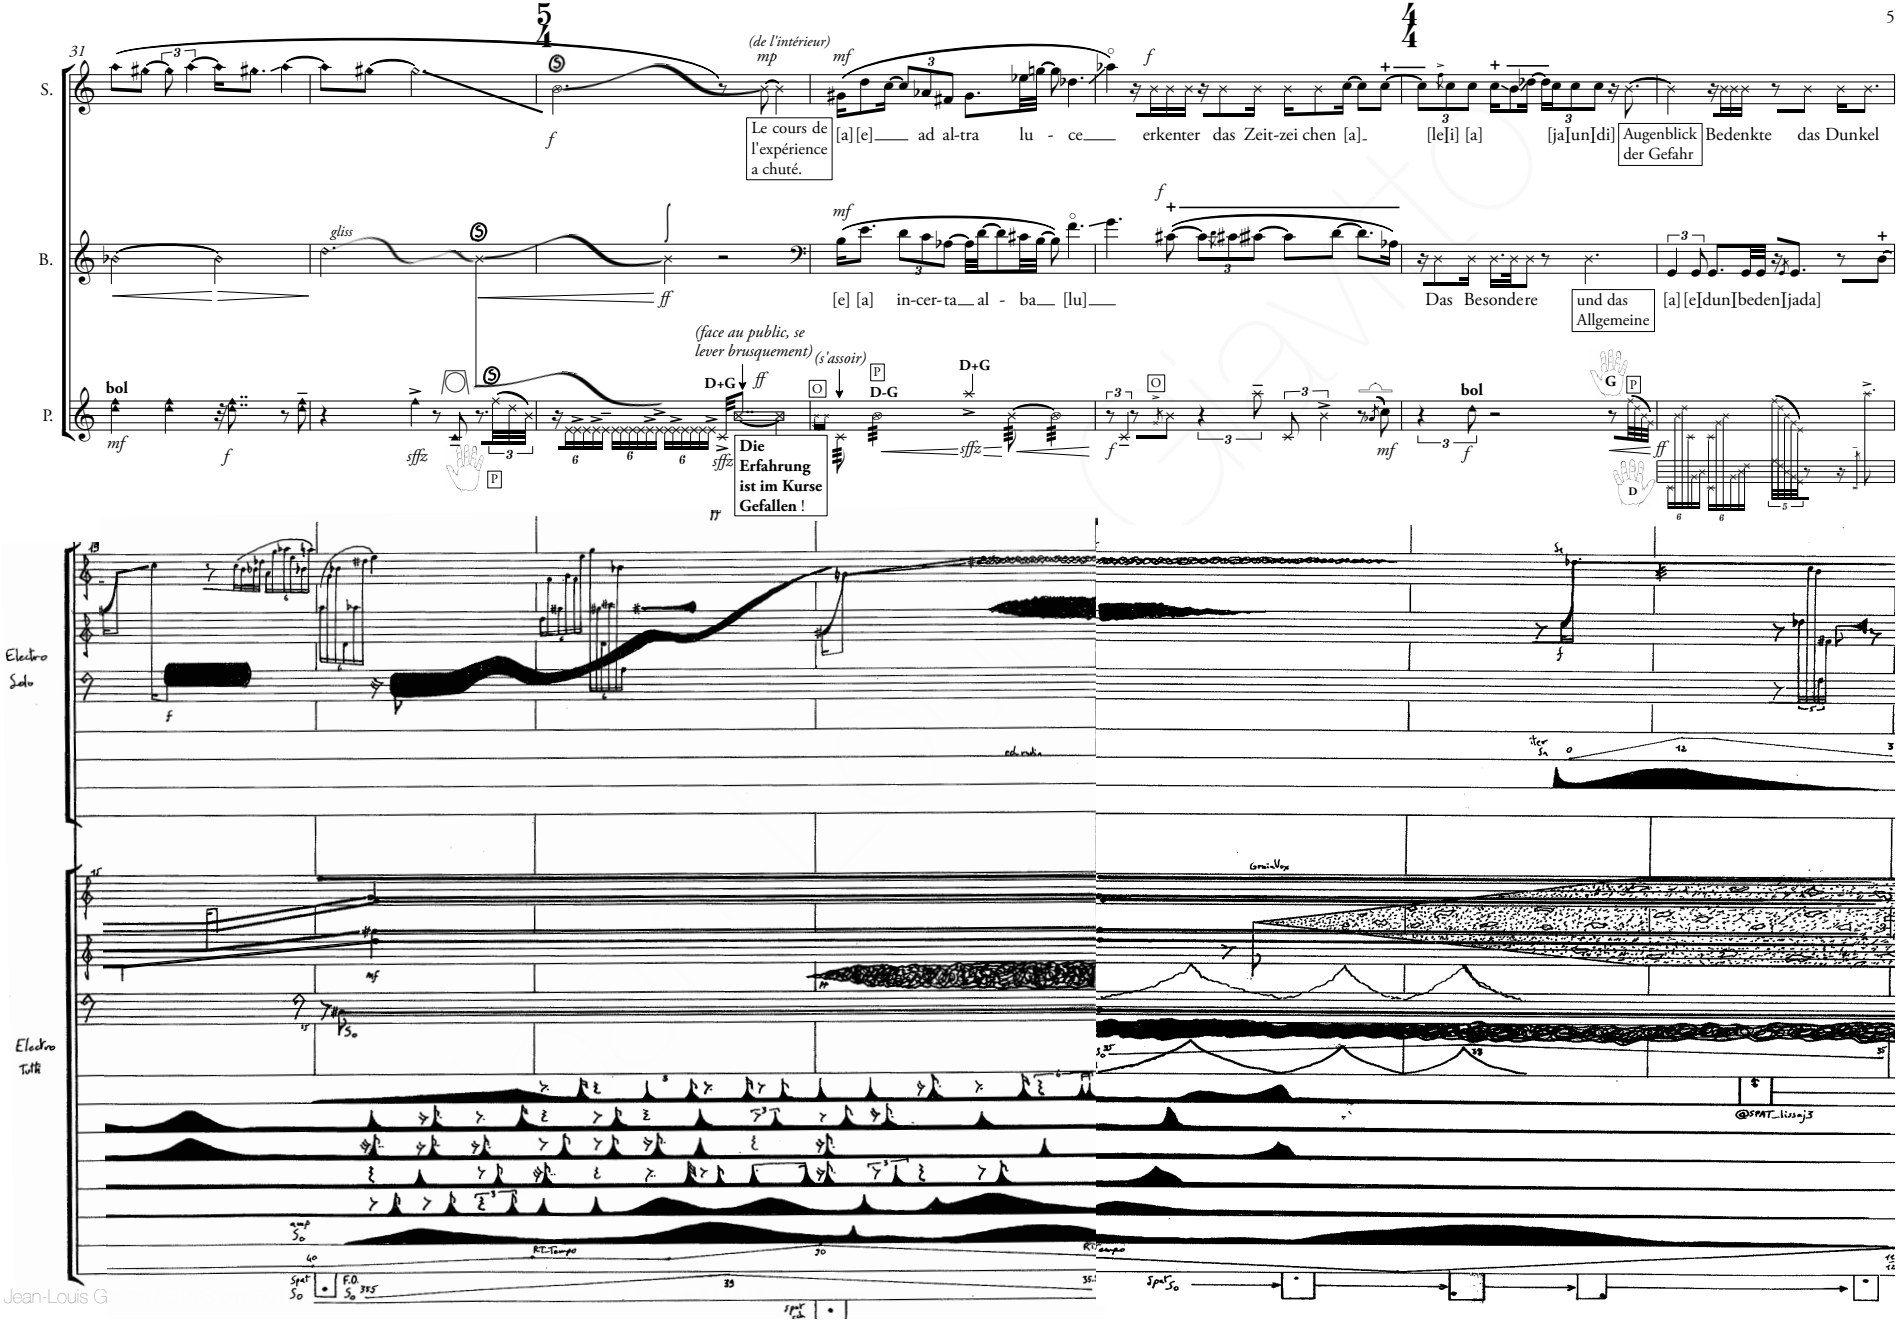
- events that last
  (duration of a note)

- continuous change of parameter (*movement*, *gesture*)
  - frequency
  - ambitus
  - sound localization
  - etc.

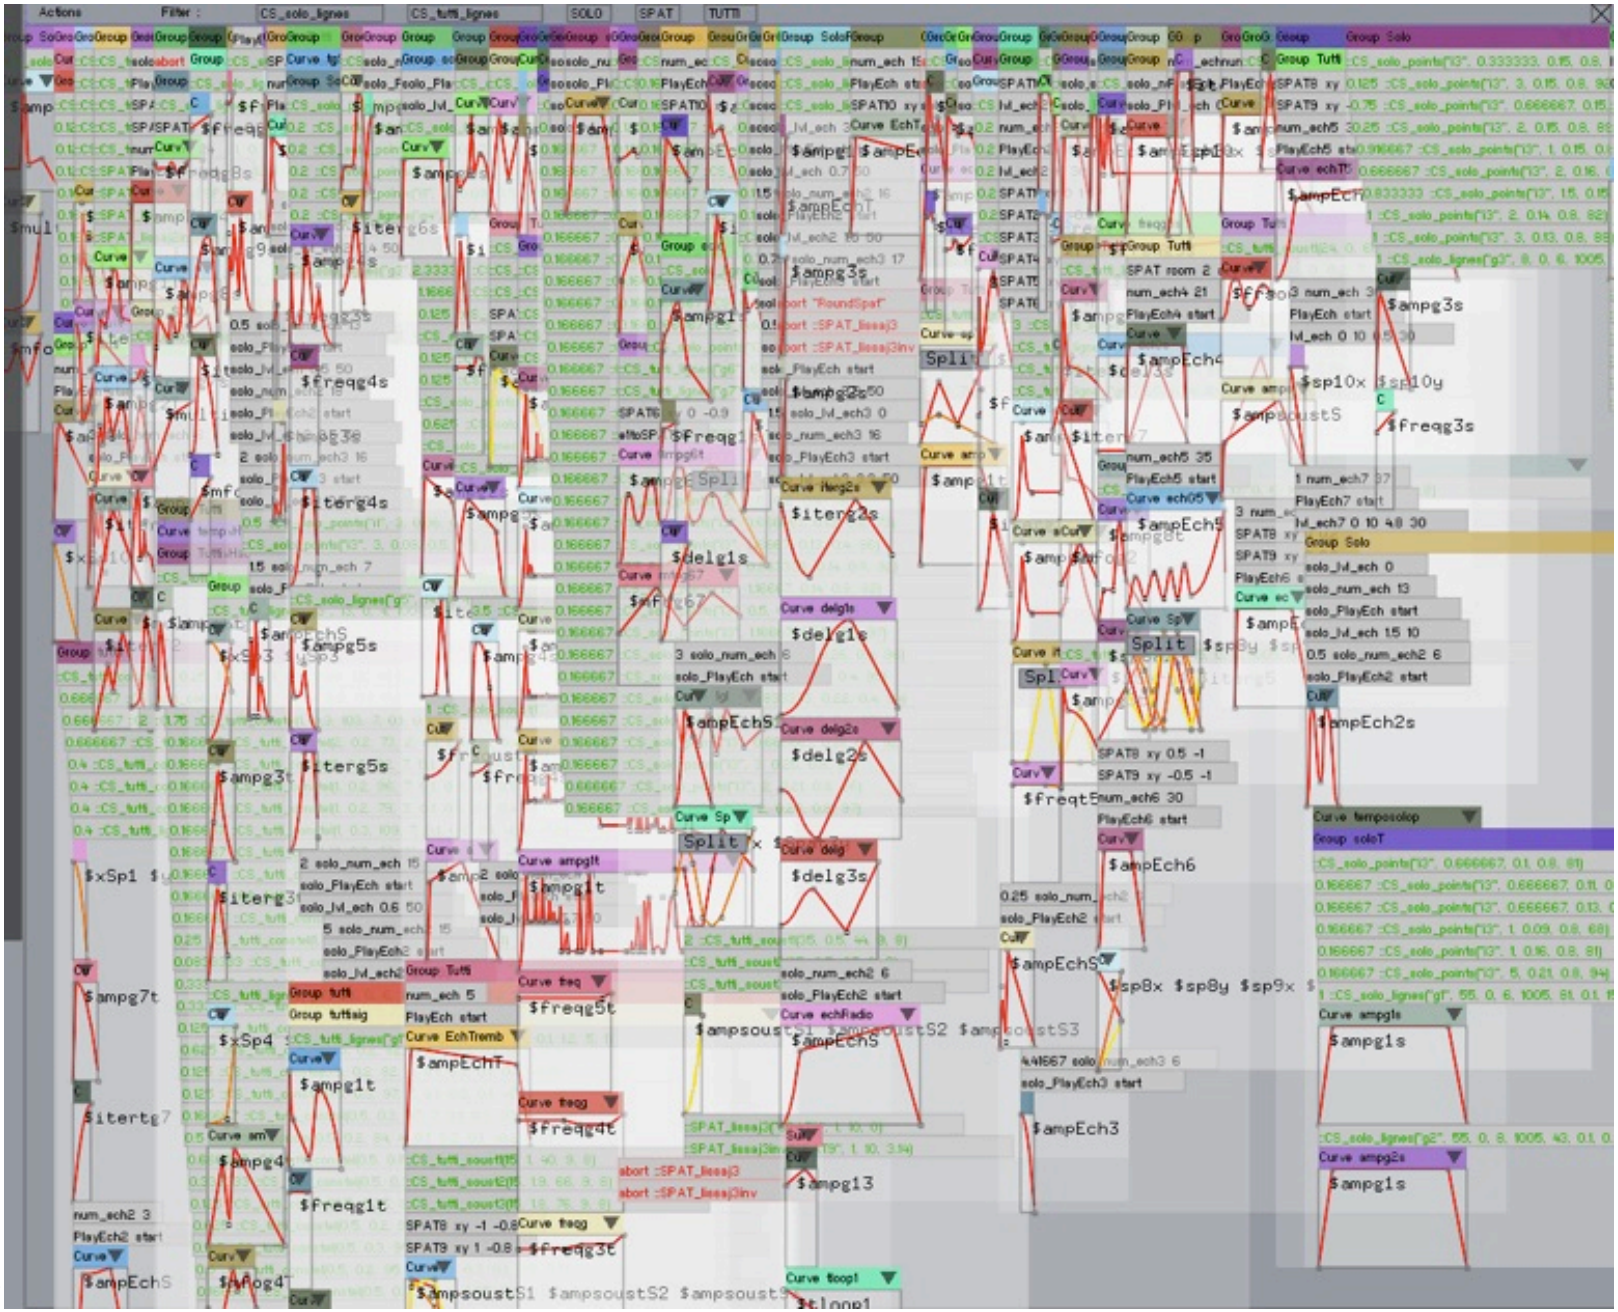


Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Nachleben Julia Blondeau (2014)



Nachleben, Julia Blondeau (8'30)



Des objets et des relations temporelles

- instant, durée
- succession, simultanéité, duration (se dérouler)
- différents temps
  - événementiel / chronométrique
  - absolu / relatif
  - continu / discret
  - contrôle / audio
- différentes échelles
  - audio (1/44 ms)
  - contrôle (2 ms -> 1 h)
  - simultanéité sonore ~ 20ms

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC INRIA MuTAnt project

Peux t'on réduire les durées aux instants ?

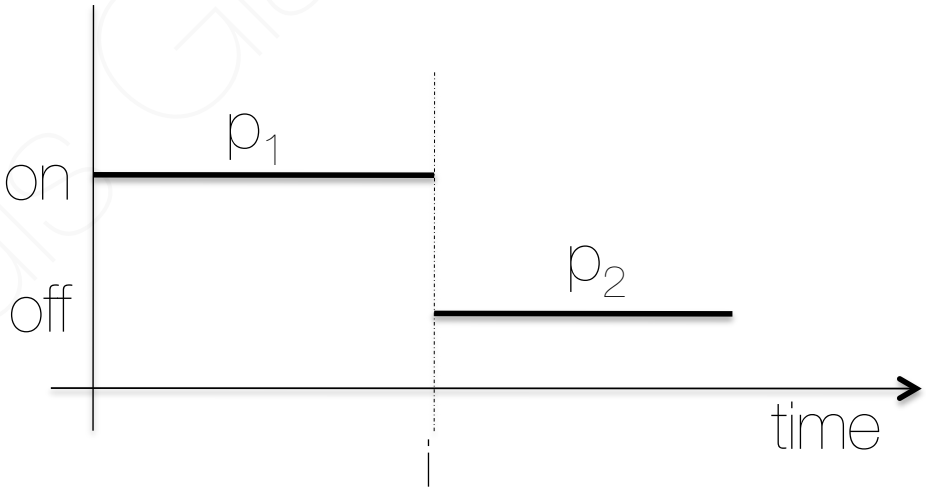
- evenemential-time

versus

- the fluxion: continuous passage of time
  - going twice faster
  - finishing together
  - accelerando
  - rubato
  - tempo
  - etc…

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Can duration be reduced to instant? (in temporal logic)

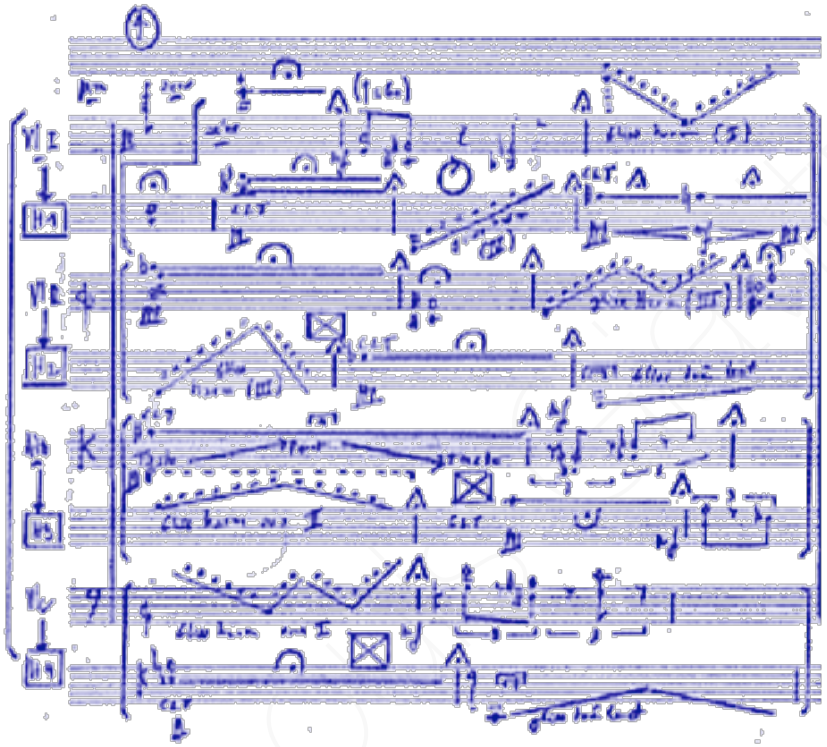


doing real analysis and topology

or

making instant and duration primitive notions

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC INRIA MuTAnt project



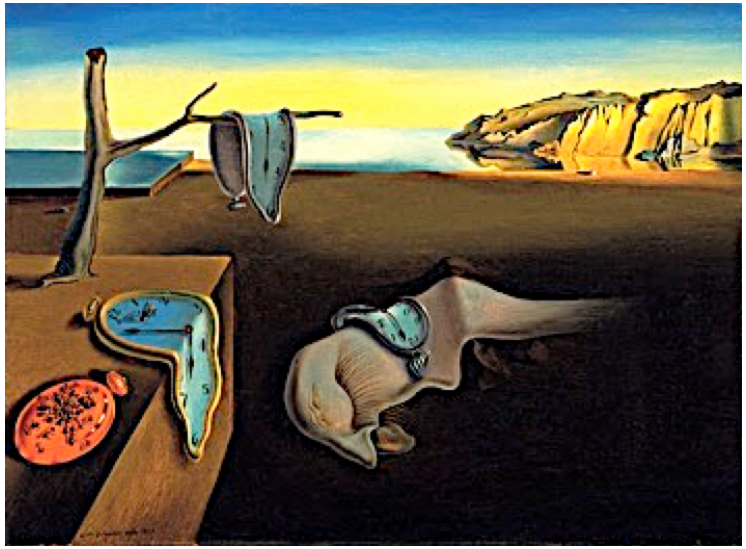
MULTIPLE TIMES

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Du temps unique aux temps multiples

- temps unique : *une horloge externe objective*
  - les événements arrivent *dans* le temps
  - temps newtonien, unités temporelles *fongibles*
  - un temps partagé prescriptif
    (qui n'est éventuellement que partiellement connu)

- temps multiples : *pluralités co-dépendantes*
  - les événements définissent le temps
    (Bluedorn: epochal time is defined by events)
  - Temps leibnizien, relationnel
  - Exemples :
    - partition : couches temporelles
    - relation partition / performance
    - co-construction lors de la performance



Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ☞ INRIA MuTAnt project

Un temps relationnel
Les heures du jour d'été et les heures du jour d'hiver

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ☞ INRIA MuTAnt project

Programming

② TEMPORAL SCENARIOS

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

The Antescofo approach

- The mixed music score is a real-time program
  - composer is a programmer
  - joint evaluation/performance of augmented score by <musician | computer>
  - the composer specifies the synchronization constraints between the two parts
- The listening module gives the program inputs
- Program constructions
  - group, forall, loop, if, whenever, curve
  - process, actors
  - pattern, track, …
  - continuations
- Data Structures
  - int, float, string…
  - vector, map, nim
  - function, process, actor, coroutine

  `@sin(), @exp(), (…? … : …), @random(), @score()…`

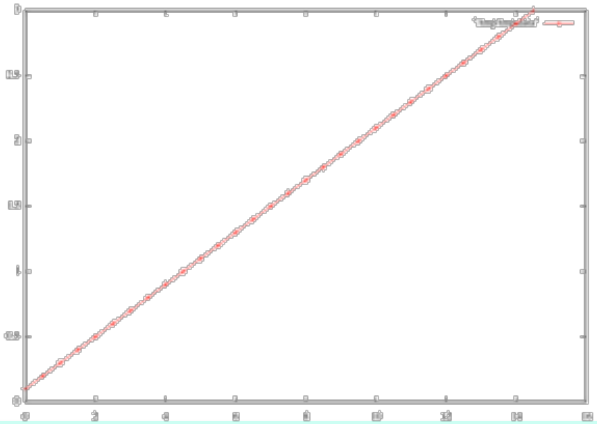
- **Imperative Variables**
  - system variables: `$RT_TEMPO $NOW $RNOW $TEMPO $PITCH,` *etc.*
  - history

    `[3#]:$x`
    `[3]:$x`
    `[3s]:$x`

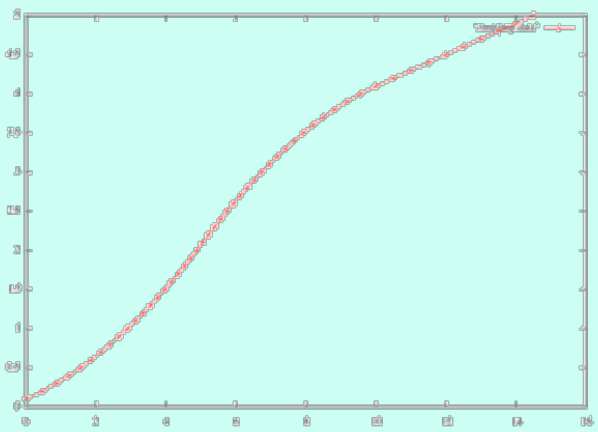
$v	*undef*	43	52	53	49
timestamps in beats	0.0	1.0	2.5	4.0	5.5
timestamps in sec	0.0	2.3	4.2	5.9	7.5

  - `@date([3#]:$x)`
    `@rdate([3#]:$x)`

Tempo inheritance



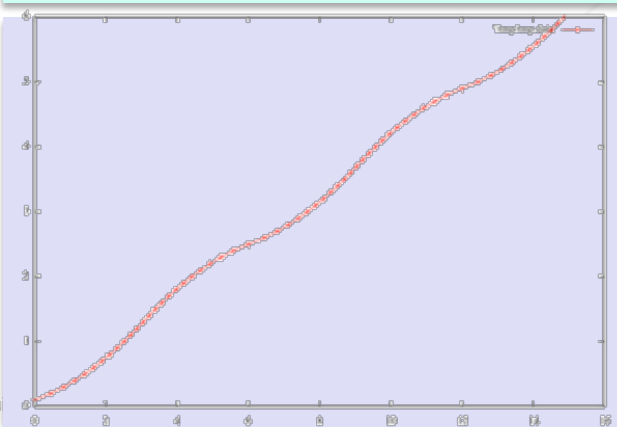
```
@proc_def ::Trace()   {
        @local $x
        $x := 0
        Loop L 0.1 {
                $x := $x + 0.1
                plot $NOW " " $x "\n"
        }
}
$trace1 := ::Trace()
```



```
Curve C1 @grain 0.05s
{  $t1 { {60} 5 {180} 5 {60} } }

Group G1 @tempo := $t1
{
        $trace2 := ::Trace()

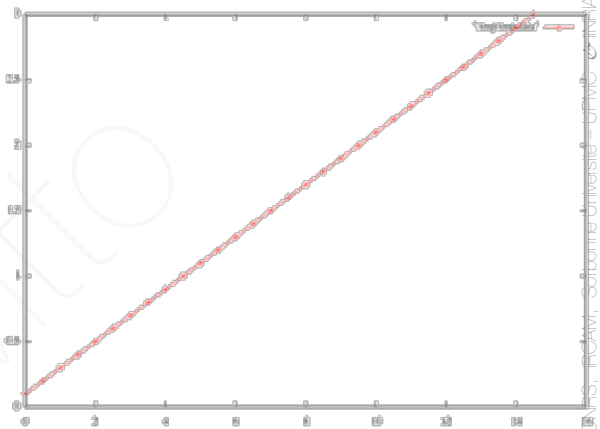
        Curve C2 @grain 0.05s
        { $t2 {  {60} 3 {180} 3 {60} 3 {180}
           3     {60} 3 {180} 3 {60} }
    }
```

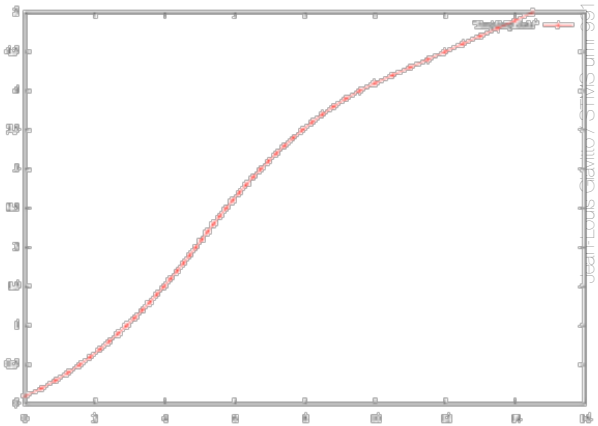


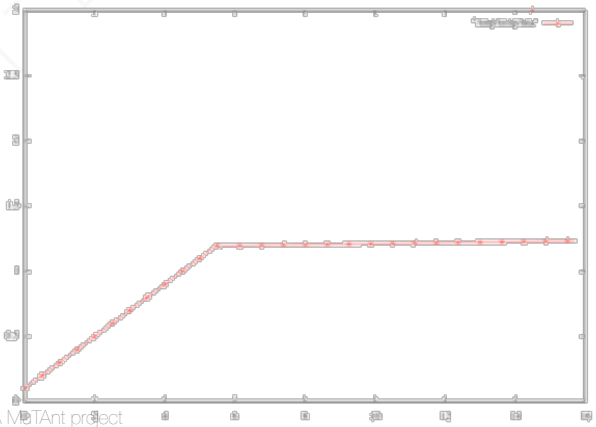
```
        Group G3 @tempo := $t2
        {
                $trace3 := ::Trace()
        }
}
```

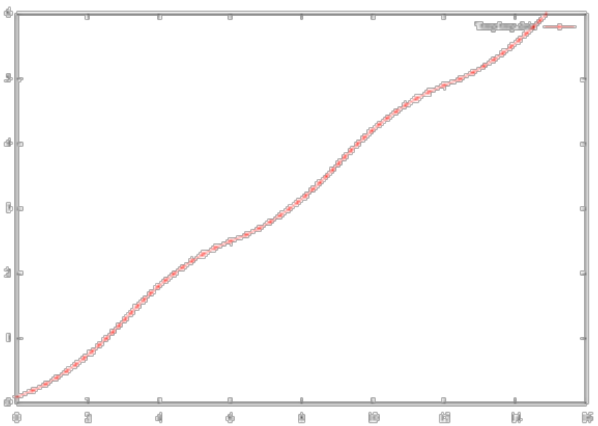
Strongly timed

- **event-driven system**
  - events from the listening machine
  - logical events
    - predicates on variables
    - begining or end of a computation (continuation)
  - introspective events
- **time-driven: computing with duration**
  - delay
  - continuous actions
  - relative time (dynamic) tempo
  - synchronization: tempo + event
- **time-controled concurrency**
  - all actions are *in parallel*
  - **no** lock/mutex/threads…

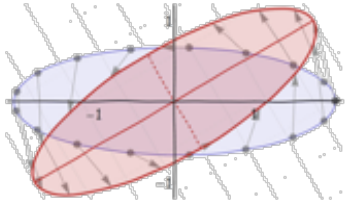








Strongly timed



- time transformations are for Antescofo
  what changes of coordinates are for postscript…
- BUT
  - time is only spent in real-time
  - time is causal
    (I don't know the transformation in the future)
  - the transformation comes from the environment
    (synchronization)
  - transformations are not necessarily *newtonian*
    (when human is in-the-loop position ≠ ∫ tempo)

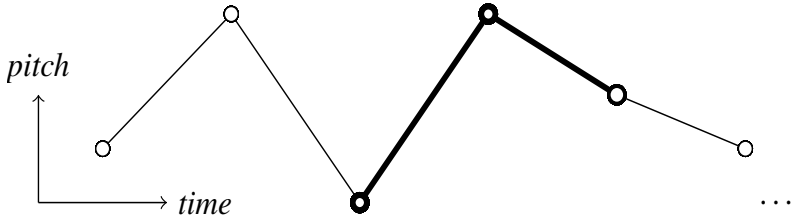
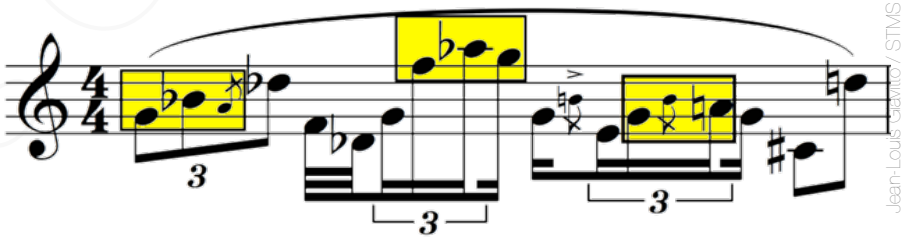
Real-Time Matching a Temporal Pattern

Real-Time Matching of Antescofo Temporal Patterns,
J.-L. Giavitto, J. Echeveste,
ACM PPDP 2014, 2014.



```
pattern P
{
   @local $x , $y , $z
   NOTE $x
   before [0.5]
   NOTE $y where $x < $y
   before [0.5]
   NOTE $z where ($y>$z) & ($z>$x)
}
```

compilation & on-the-fly matching



```
1  whenever ($PITCH) {
2    @local $x
3    $x := $PITCH
4    whenever ($PITCH > $x) {
5      @local $y
6      $y := $PITCH
7      whenever ($PITCH<$y & $PITCH>$x) {
8        @local $z
9        $z := $PITCH
10       a
11     } during [1#]
12   } during[1#]
13 }
```

Dynamic Target

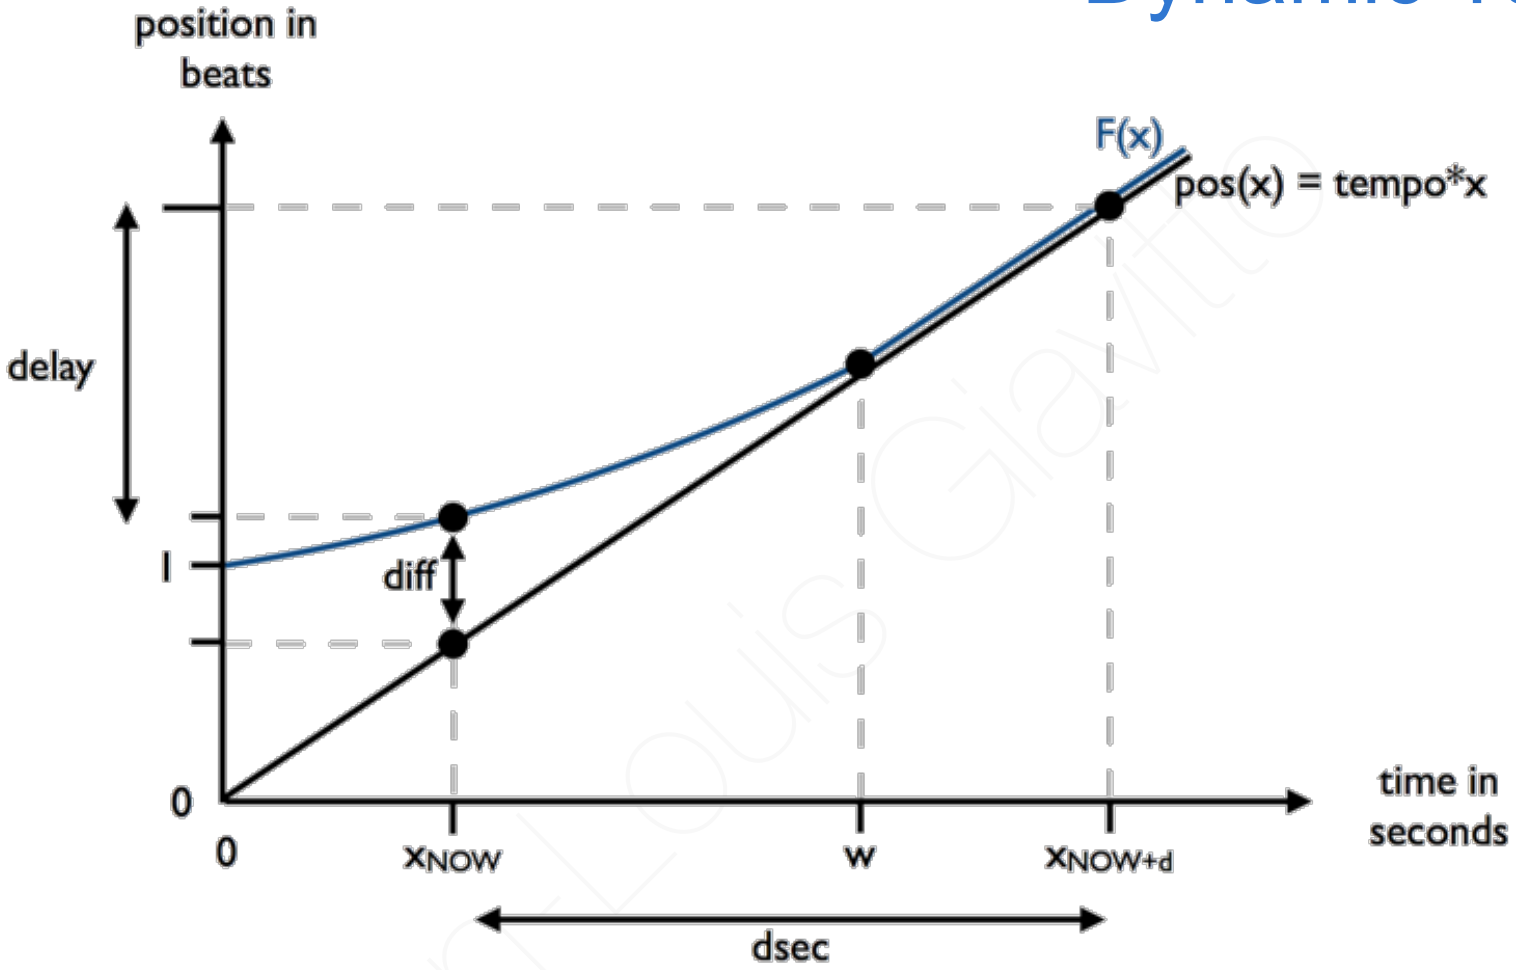

Fig. 10. Method used to compute a duration $dsec$ in seconds corresponding to a delay $delay$ in beats with a dynamic target $[w]$ and with a initial difference of position $diff = \tau.beatPos - position$. Function F represents the position in τ as a function of time x. It is made of two parts: a part G where the $\tau.tempo$ changes linearly until it becomes equal to $tempo$. From this time, F evolve as pos, with $\tau.tempo = tempo$ (a constant). Function G is the part of the parabola that goes from $x = 0$ to $x = w$. Because the origin is translated w.r.t. the origin of the physical time, the date x_{NOW} of the current instant is localized on the X axis by looking at the point which achieve the current difference $diff$.

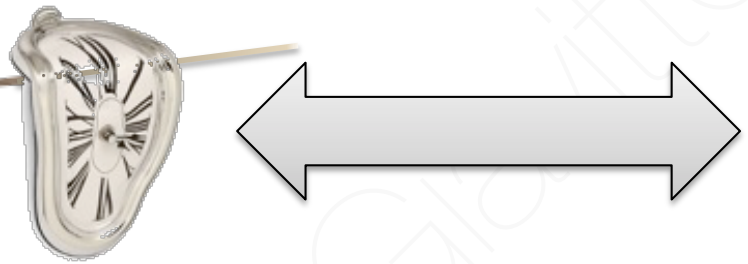
Aligner les ligne de temps de chacun



Un repère temporel :

- des événements partagés
- une estimation du temps qui passe chez l'autre

Une seconde par seconde

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Subordonner le temps objectif au temps subjectif *au lieu du contraire*

- Les événements partagés ne suffisent pas :
  la durée n'est pas réductible aux instants
  - diviser une durée par deux
  - accelerando
  - le phrasé musical (ex. rubato)
- Le "taux de change" varie dans le temps et n'est connu qu'après.
  Il se construit avec le temps lui-même.
  - A-series et B-series,
  - temps compositionnel hors-temps et temps performatif temps réel
- Le temps subjectif est utile : la partition est écrite / tempo, pas au temps physique
- *In fine*, parce que c'est une approche effective : elle permet une interaction musicale entre instrumentistes et machine

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ☞ INRIA MuTAnt project

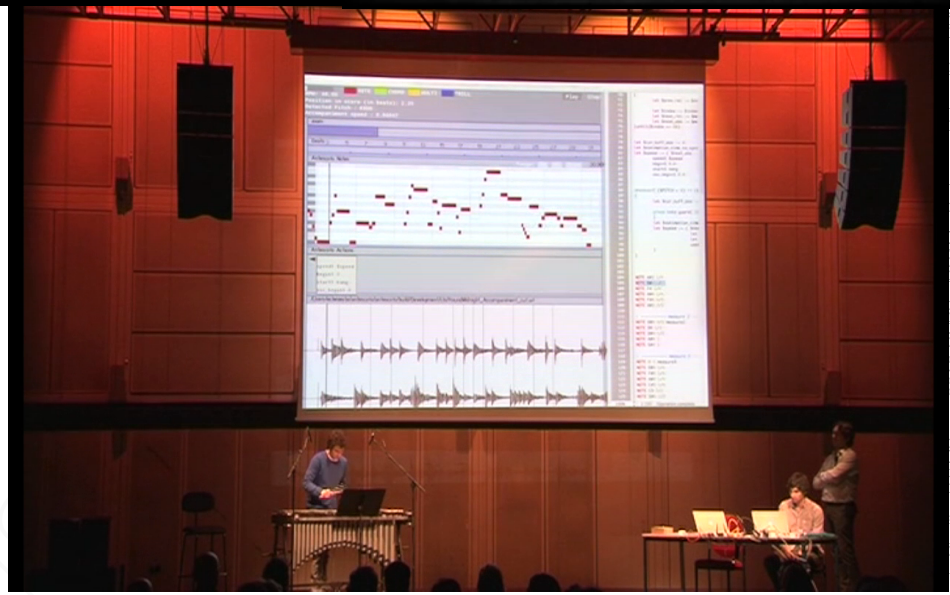
- of 150+ users from around the globe

Awards

IEEE ICASSP Best Student Paper Award in MLSP, 2015; CMR, Best Student Paper Award 2015; Acoustical Society of America Best Paper Award 2014; ICMC, Best Presentation Award 2014; French Minister of Industry's prize for Antescofo, 2013 (ONFI)

Towards Greater Public



Videos accessible on **http://repmus.ircam.fr/antescofo/videos**

Community

Antescofo is also:

- 100+ performances with ensembles around the world
- Community of 150+ users with contributions from around the globe
- ~5K downloads since 2013
- Subject to teaching for musicians in Brasil, Seoul, Japan, Montreal, USA, Europe… .
- Subject to massive media coverage thanks to its users:

Jean-Louis Giavitto / STMS umr 9912 CNRS, IRCAM, Sorbonne Université – UPMC ⇗ INRIA MuTAnt project

Perspectives

The Augmented Score

- temporal scope as denotable value
- musical gesture
- embedding composer specific languages (idiosyncrasy)
- abstraction
- durative *vs* continuous computations

Next Generation of IMS

- offline and online score analysis
- offline and online score scheduling
- real-time score execution at sample accuracy
- extensible-, distributed-architectures for interactive music systems (ex.: VST, RTAS, audio plugins)

Digital Preservation

- compilation

Beyond Music

- cyber-temporal systems: exploring other highly timed interactive scenarios (**Robotics**, Domotics)
- Programming with Perceptual Concepts
- other sensing devices/listening machines

All Watched Over By Machines of Loving Grace

by Richard Brautigan

I like to think (and
the sooner the better!)
of a cybernetic meadow
where mammals and computers
live together in mutually
programming harmony
like pure water
touching clear sky.

I like to think
(right now, please!)
of a cybernetic forest
filled with pines and electronics
where deer stroll peacefully
past computors
as if they were flowers
with spinning blossoms.

I like to think
(it has to be!)
of a cybernetic ecology
where we are free of our labors
and joined back to nature,
returned to our mammal
brothers and sisters,
and all watched over
by machines of loving grace.
